Code: github.com/MRC005/AIRTEL_SYNC

Platform Partner unstop

Leads are lost to process friction, not to lack of demand

Only 368 of 5,000 leads (7.4%) activate. 1,636 of the drops are visits, quotes, paperwork and install waits a digital journey can remove.

Drop reasons at each stage, smb_leads.csv (synthetic), Apr–Jun 2026. The other 2,996 drops are no-answer, not interested, price or provider lock-in: the advisor still helps, but we do not count them.

17.6 days

from lead to activation, with customers chasing status 3 times on average

6% → 28%

6-month churn rises with every status chase (1 call vs 5 calls). Waiting hurts loyalty, not just conversion

₹15,053

acquisition cost per activation, against a median bundle of ₹6,900/month

9.6% vs 2.0%

activation with vs without a GSTIN. A ₹41,700 CAC for no-GSTIN leads: needs a different, cheaper path

Win offices first; serve micro shops with zero visits

Payback = acquisition cost ÷ monthly bundle value. Micro retail is 54% of leads but takes 8 months to pay back and churns 23% in 6 months.

Priority · segment	Share of leads	Activation	CAC / activation	Avg monthly value	Payback	6-mo churn	Bundle we lead with (tier-2 entry price)
1 Professional offices	25%	11.1%	₹10,695	₹6,796	1.6 mo	13.8%	Pro Office: fibre 300 + email & antivirus per user + cloud backup + 3 SIMs · ₹5,583/mo (12 staff) · 12 mo
2 Small multi-site	15%	11.0%	₹15,614	₹31,233	0.5 mo	10.8%	Branch Connect: fibre + failover + SD-WAN per site, POS, CCTV · ₹28,970/mo (5 sites) · 24 mo
3 Small manufacturers	6%	12.8%	₹15,324	₹19,980	0.8 mo	8.1%	Factory Secure: leased line + firewall + machine IoT + email · ₹14,312/mo · 24 mo
4 Micro retail & services	54%	4.1%	₹20,007	₹2,505	8.0 mo	22.7%	Dukaan Starter: fibre 100 + 1 SIM + website · ₹1,597/mo; with GSTIN, WhatsApp API instead of website · ₹2,297/mo

Digital-first

Professional offices: one owner decides, single site, high GSTIN share (86%). The advisor can close them without a visit.

Assisted

Multi-site & manufacturers: highest value, need a site survey. Advisor qualifies and quotes; partner or field closes.

Digital-only

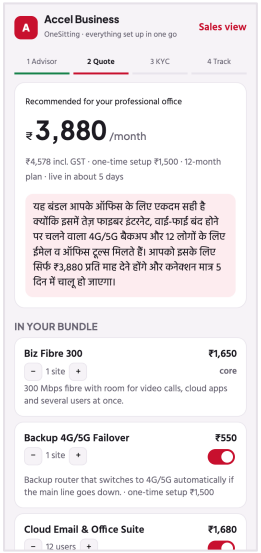

Micro: never send a salesperson (CAC ₹20k vs ₹2.5k/ month). Self-serve starter, AirFiber where no fibre, upsell after 3 months.

One sitting, on the phone, in the owner's language

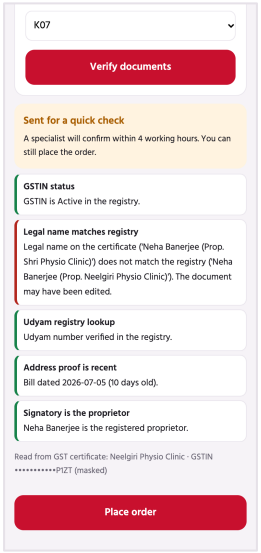

Working prototype. The AI advisor talks; a rules engine picks products and prices, so it never quotes something the business cannot buy.

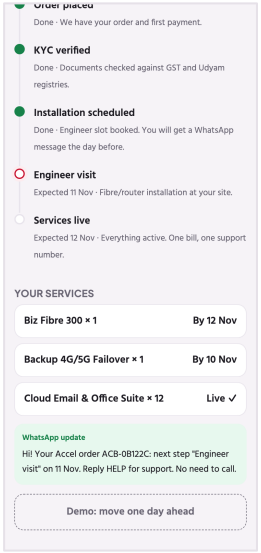

1 · Advisor asks ≤6 questions in the owner's language

2 · One monthly price toggle add-ons, see GST & setup

3 · Smart KYC in seconds registry checks, plain-language fixes

4 · Order tracker WhatsApp updates instead of calls

How the advisor decides

Gemini talks in the owner's own language and script (tested in Hindi and Tamil; the model also supports Kannada, Marathi, Bengali and more) and fills a business profile: type, staff, sites, city, GSTIN, needs.

A deterministic engine applies every catalogue rule: city tier, minimum staff and sites, GSTIN-only products and product dependencies. It swaps in the closest eligible product and says why.

Tested cases: no GSTIN → website instead of WhatsApp API; no fibre → 5G AirFiber; 5 staff asking for a leased line → fibre 300 + failover.

Why it matters: Tamil- and Kannada-preferring leads activate at 4–5% vs 8% for Hindi/English. A vernacular advisor targets that gap directly.

Smart KYC: seconds, not days, and private by design

OCR + registry checks replace physical document collection. Problems the owner can fix are returned to them; only real doubts reach a human.

Consent screen (DPDP notice) › **Image quality gate blur · auto-straighten** › **OCR OpenCV + Tesseract** › **GSTIN checksum + OCR auto-repair** › **GST & Udyam registry lookup** › **Cross-document rules → decision**

Sample	What our checks found	Decision
K01	GSTIN cancelled in registry; Udyam no. missing (OCR slip I→T auto-fixed)	**Re-quote without GST products**
K02	Certificate photographed 7° tilted → straightened, all checks pass	**Approved**
K04	GST certificate too blurry to read → ask for a retake	**Owner fixes**
K05 · K10	LLP signatory needs an authorisation letter; K05 also missing Udyam certificate; K10 GSTIN OCR slip auto-repaired	**Owner fixes**
K06	GSTIN on document fails checksum (1 digit changed)	**Manual review**
K07	Legal name edited: ‘Shri’ vs registry ‘Neelgiri’ Physio Clinic	**Manual review**
K11	Utility bill 257 days old (limit 90)	**Owner fixes**
K03 K08 K09 K12	All checks pass	**Approved**

DPDP Act 2023 choices

Consent first: a plain notice (purpose, data, retention, rights) before any upload; no upload API works without a consent ID.

Purpose limitation: KYC data is used only to verify and activate, never for marketing.

Minimisation: images are deleted as soon as fields are read; GSTIN, Udyam and ID numbers are masked in the UI and logs.

Retention & rights: verified fields kept for the contract plus the regulatory period; view, correct or withdraw from the app.

Next: DigiLocker pull and Aadhaar e-sign replace uploads entirely for most owners.

Architecture: phone web app with voice input → FastAPI → advisor (Gemini + rules engine) · quote · Smart KYC · orders & tracker · sales view (propensity model). WhatsApp front end is the next step.

Rivals sell products; nobody sells a finished setup

Based on each player's public SMB positioning (2025–26) and the provider mix in our 5,000 leads.

Player	Where they win	Gap OneSitting exploits
JioBusiness	Low entry price: 100 Mbps business broadband from about ₹801/mo with JioMeet and productivity tools	Connectivity-led plans; the owner still has to work out the rest of the stack
Vi Business	'Ready For Next' digital-readiness score; website builder, business email, device management	Assessment gives a score and suggestions, not an instantly priced, KYC-ready bundle
Tata Tele Business Services	SMB-only focus; Smartflo cloud telephony, SIP, managed security and internet	Communication-centric, sales-led buying journey
Local ISPs & resellers (21% of our leads)	Cheapest price, neighbourhood relationship, quick install	No bundle, SLA or single bill. Their customers activate with us at only 5.4%: price objections, not trust
Digital-first single-product apps	Instant online sign-up for one product (WhatsApp API, POS, website)	One product each: separate bills and support numbers for every tool
OneSitting (Accel Business)	Whole stack in one sitting: vernacular advisor, rules-safe bundle, registry KYC, tracker, one bill	Right to win: 1,890 leads already use Accel (mobile) and activate at 9.2%, the best of any provider group

Price is the #1 stated objection (621 drops). Our answer is value at a clear monthly price (Dukaan Starter at ₹1,597 vs ₹900 median current spend for micro), not a price war.

Impact: nearly double activations from the same leads

Conservative model on the Apr–Jun data: recover only part of each friction drop, then apply today's downstream conversion.

13.2%
lead → activation (from 7.4%)

₹8,400
CAC per activation (from ₹15,053, same spend)

+291
activations per 5,000 leads

~₹9.6 cr
extra annual recurring revenue

Assumptions: recover 40% of visit drops, 60% of quote drops, 50% of paperwork drops, 30% of install cancellations. ARR at the ₹6,900 median bundle; four quarters. Pilot will measure each lever separately.

Metric (what we report weekly)	Today	12-mo target
Lead → activation conversion	7.4%	13%
Days from lead to activation	17.6	≤ 7 (≤ 5 micro)
Status chases per customer	3	≤ 0.5
Acquisition cost per activation	₹15,053	≤ ₹8,500
6-month churn	15.2%	≤ 10%

Field force and partners: the advisor adds to them

Partners own their pin codes: every digital sale in a partner's area pays them a commission, so they push the app instead of fighting it.

Humans get the right leads: the sales view ranks stalled leads by a propensity model. Calling the top 20% reaches 41% of all activations.

Field sales where visits add value: site surveys for multi-site and manufacturing; no visits for micro shops.

Referrals as a channel: referral leads activate at 14.8% at ₹4,100 CAC, the best of any source. Built-in 'refer a business' reward.

Rollout: M0–2 pilot in Pune (tier 1) and Jaipur (tier 2) for professional offices and GSTIN micro; M3–4 WhatsApp + voice; M5–6 national, multi-site via partners.

Key risk: GenAI errors. Mitigation: AI never sets products or prices; the rules engine does.
